

## SP 500 SMART PALLETISER

Compact, polyvalent pour de multiples formats,  
Conçu pour de hautes performances en  
environnements industriels du "post-press".

Le meilleur de la palettisation!

- Double pince avec piles cerclées

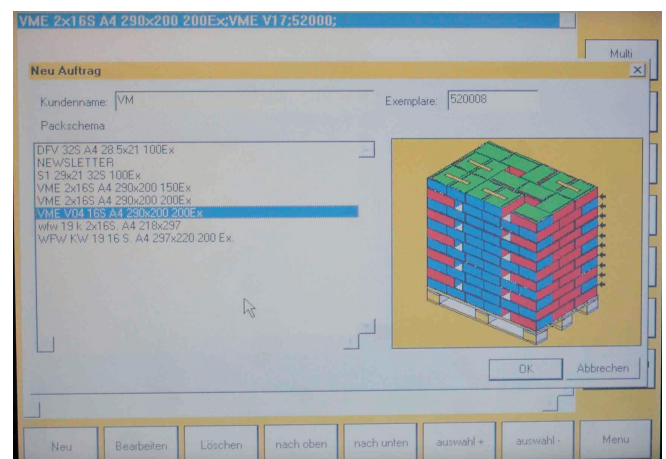

La pince place les piles selon le programme que vous avez choisi sur écran tactile

## ■ SPECIAL CHARACTERISTICS

The **SP 500** is delivered with an integrated double feed station as a pick-up station for the double gripper, protective fences, safety devices, slipsheet gripper and easy to operate palletizing software for nearly every format you have to print for your customer. Due to its especially compact and sturdy construction, the robot cell may be transported with a fork truck to its place of use and started up in shortest time.

When the material flow is changed, e.g. by addition of accumulator or buffer lines, the **SP 500** can be easily relocated into a new position. Reprogramming or teaching is not necessary since the take-up station is also moved.

With the long experience of conveyor technique in the automation of logistic flow, buffers for stacks before the robotcell and bufferstations for the packed pallets after the palletising process can be integrated individual to your environment, so that you have maximum of steady automation and a minimum use of operators.

# InLog-RobotSystems

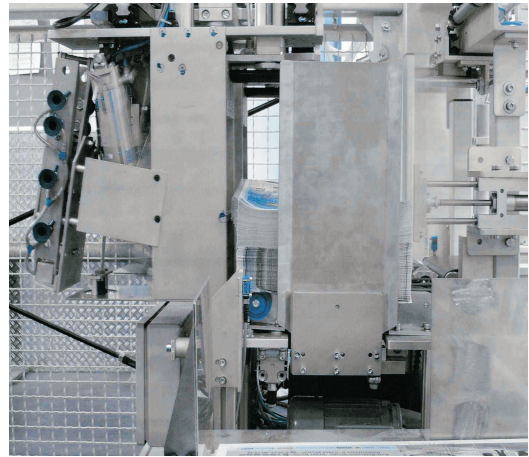

- Equipement standard
- Structure rigide pour une palettisation
- Contrôle par automate et écran tactile  
Menus et choix de schémas de palette  
Pose de feuille et statistiques de production
- Double poste d'introduction
- Double pince à multiples formats  
à palettiser selon le schéma programmé
- Commande des axes de déplacement  
à technologie haute vitesse
- Technologie de pilotes sans entretien
- Margeur à feuille automatique  
avec insertion pendant le cycle de palettisation

- Options
- Margeur automatique 15 palettes
- Convoyeur de chargement de palettes  
vides et évacuation des pleines
- Ligne de convoyeurs d'alimentation

## ■ Application **SP 500 SMART PALLETISER**

Flexible application of 4-axis portal robot for graphic products which are to be packed on a pallet within the cycle of the rotation and fully flexible for most used papersizes .

Designed specially for mail rooms, or any place where large volumes of goods must be quickly and flexibly prepared for further transport.

## The **SMART PALLETISER SP 500**

is able to handle all kind of paper stacks. With the right combination of the gripper and the pick-up station he can handle the different formats either wrapped in foil or strapped with ribbons or loose paper stacks.
